Test Instructions

Live demo

URL: `https://pdf-agent-ui.onrender.com`

The free-tier service sleeps after 15 minutes idle. The first request after sleep takes 30-40 seconds to wake. Be patient on the first query.

Try these queries

The repo's `data/sample.pdf` is the assignment brief itself, 5 pages. Upload it from the empty-state card.

5 valid queries (should answer with a citation)

#	Query	Expected
1	What is the date of this assignment?	Cites page 1, quotes "Date: 22nd April 2026".
2	What submission deliverables are required?	Cites page 1, lists technical note, test instructions, demo video, optional deployed interface.
3	What evaluation criteria are listed for the narrative-to-visual story task?	Cites page 1-2, mentions coherence, scene breakdown, determinism, reproducibility.
4	How many valid and out-of-scope queries do I need to provide for the PDF agent's test set?	Cites page 4, "5 valid queries" and "3 invalid / out-of-scope queries".
5	Does the assignment offer bonus credit for multilingual support?	Cites page 4, answers yes with the bonus criteria.

For each, you should see:

- An answer with a `[p.N]` chip

- Click the chip → PDF jumps to that page and highlights the cited text in yellow
- "Show N sources" reveals the verbatim quotes

3 out-of-scope queries (should refuse)

- *Who is the CEO of OpenAI?*
- *What is 17 squared?*
- *Summarise the latest news about Indian elections.*

Expected: an amber refusal box, not an answer. The agent will not hallucinate even if you push hard.

Multilingual

- Hindi: इस असाइनमेंट की तारीख क्या है?
- Hindi: क्या मल्टीलिंगुअल सपोर्ट के लिए बोनस अंक मिलते हैं?
- Marathi: या असाइनमेंटसाठी कोणते डिलिव्हरेबल्स आवश्यक आहेत?

Expected: answer in the same language (Devanagari script), citations stay verbatim in the English source.

Conversation memory

After any answer, ask a pronoun follow-up like *"and what about the bonus?"*. The agent's `rewrite` node resolves the reference using the prior turn.

Run locally instead

```
git clone https://github.com/YashrajKupekar17/PDF-agent
cd PDF-agent
cp .env.example .env       # fill in OPENAI_API_KEY and PINECONE_API_
uv sync
cd ui && npm install && cd ..

make api    # FastAPI on :8000
make ui     # Next.js on :3000
```

Open `http://localhost:3000`.

Reproduce the eval numbers

```
make eval     # 11 queries — binary pass/fail (~90s)
make ragas    # Ragas metrics (~3min)
```

Caveats on the deployed instance

- **Uploaded PDFs reset on container restart.** Free-tier disks are ephemeral. The chunks survive in Pinecone, so old chats still work, but `/pdf/{id}/raw` will 404 — the PDF preview won't render.
- **Cohere trial: 10 RPM.** The agent gracefully falls back to the unranked top-K if rate-limited.
- **No auth, no rate limit.** Don't share the URL widely.
